FYP PROJECT

**02-2020
01/2021**

- **PharmaDoc Developer**
- The main goal of our project is to make a centralized platform which will help users by reducing the hassle of waiting in long queues for their turn at medical stores, doctor clinics and laboratories.
- This project will provide users the ability to book appointments from different doctors from their home
- All the necessary information regarding doctor's specialty and his clinic
- Timings will be easily available to user, so that they feel no difficulty in getting their appointment.
- This system will also help users to buy medicines online from an online pharmacy where they can
- get those medicines delivered at their doorstep with options of paying online or on delivery and get them prescribed digitally.
- Also, if they want to get an appointment for lab test, they can get.
- Patient portal contains all their information and regarding to their treatment and saved their previous history
- User can order medicine by uploading their prescription
